

BEC305 Python Programming — previous years' question paper index

Branch-level merged papers copied from `public/Previous Years QPs/EC/` . 9 files, all copied unchanged. No per-semester or per-subject subfolders exist upstream.

What the search found

No paper in this folder contains a question paper for BEC305 Python Programming. Every file was searched for the code `BEC305` and for the subject title, and neither combination produced a question page. The code `BEC305` does not appear anywhere in these papers.

The title *Python Programming* does appear in 1 file — `EC_Even.pdf` — but under a different code, semester and scheme. Those papers are **not** for this subject and must not be issued as if they were.

This folder therefore contains the branch papers for reference and completeness, but **no question paper for this subject exists in the supplied set**. That is reported here rather than shipping a folder that implies otherwise.

Paper-by-paper index

File	Pages	Exam session	<code>BEC305</code> in index	Subject under that code	Paper for this subject	Approx. pages	Question numbers
2023 ECE Even sem.pdf	95	(not printed in the extractable text)	no	—	no	—	—
2023 ECE Odd sem.pdf	92	(not printed in the extractable text)	no	—	no	—	—
2024 ECE Odd sem.pdf	51	(not printed in the extractable text)	no	—	no	—	—
EC 2023-24.pdf	51	(not printed in the extractable text)	no	—	no	—	—
Ec Dec-Jan 2024.pdf	51	(not printed in the extractable text)	no	—	no	—	—
EC QP Merged june-july 2024.pdf	81	(not printed in the extractable text)	no	—	no	—	—
EC- Dec-jan 2024.pdf	87	(not printed in the extractable text)	no	—	no	—	—

File	Pages	Exam session	BEC30% in index	Subject under that code	Paper for this subject	Approx. pages	Question numbers
EC_Even.pdf	54	(not printed in the extractable text)	no	—	no	—	—
EC_Odd.pdf	94	(not printed in the extractable text)	no	—	no	—	—

0 of 9 papers contain a question paper for this subject.

Method and its limits

Page numbers are approximate. These merged PDFs use compressed object streams, and the text was recovered by inflating every content stream and reading the `Tj` and `TJ` operators; the stream index is scaled to the declared page count to estimate a printed page. Use the index to locate the paper within the merged file, then confirm visually. Subject codes, titles, question numbers and module headings are taken verbatim from the extracted text, never inferred.

Caution on scheme drift

These papers were set under earlier schemes. Where a paper for this subject exists at all, its syllabus is close to but not identical with the 2025-scheme syllabus taught by this deck set, and module boundaries in particular have moved. Treat them as a guide to question style, difficulty and mark allocation rather than as a module-by-module question bank.
